## 16-Bit Registered Transceiver with 3-STATE Outputs

### General Description

The ABT16543 16-bit transceiver contains two sets of D-type latches for temporary storage of data flowing in either direction. Separate Latch Enable and Output Enable inputs are provided for each register to permit independent control of inputting and outputting in either direction of data flow. Each byte has separate control inputs, which can be shorted together for full 16-bit operation.

### Features

- Back-to-back registers for storage
- Bidirectional data path
- A and B outputs have current sourcing capability of 32 mA and current sinking capability of 64 mA
- Separate control logic for each byte
- 16-bit version of the ABT543
- Separate controls for data flow in each direction
- Guaranteed latchup protection
- High impedance glitch free bus loading during entire power up and power down cycle
- Nondestructive hot insertion capability

### Ordering Code:

Order Number	Package Number	Package Description
74ABT16543CSSC	MS56A	56-Lead Shrink Small Outline Package (SSOP), JEDEC MO-118, 0.300" Wide
74ABT16543CMTD	MTD56	56-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide

Devices also available on Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

### Connection Diagram

Pin Assignment for SSOP and TSSOP

### Pin Descriptions

Pin Names	Description
$\overline{OEAB}_n$	A-to-B Output Enable Input (Active LOW)
$\overline{OEBA}_n$	B-to-A Output Enable Input (Active LOW)
$\overline{CEAB}_n$	A-to-B Enable Input (Active LOW)
$\overline{CEBA}_n$	B-to-A Enable Input (Active LOW)
$\overline{LEAB}_n$	A-to-B Latch Enable Input (Active LOW)
$\overline{LEBA}_n$	B-to-A Latch Enable Input (Active LOW)
$A_0$ - $A_{15}$	A-to-B Data Inputs or B-to-A 3-STATE Outputs
$B_0$ - $B_{15}$	B-to-A Data Inputs or A-to-B 3-STATE Outputs

### Logic Symbol

### Data I/O Control Table

Inputs			Latch Status	Output Buffers
CEAB <sub>n</sub>	LEAB <sub>n</sub>	OEAB <sub>n</sub>	(Byte n)	(Byte n)
H	X	X	Latched	HIGH Z
X	H	X	Latched	—
L	L	X	Transparent	—
X	X	H	—	HIGH Z
L	X	L	—	Driving

H = HIGH Voltage Level  
 L = LOW Voltage Level  
 X = Immaterial  
 A-to-B data flow shown;  
 B-to-A flow control is the same, except using  $\overline{CEBA}_n$ ,  $\overline{LEBA}_n$  and  $\overline{OEBA}_n$

### Functional Description

The ABT16543 contains two sets of D-type latches, with separate input and output controls for each. For data flow from A to B, for example, the A to B Enable (CEAB) input must be low in order to enter data from the A port or take data from the B-Port as indicated in the Data I/O Control Table. With CEAB low, a low signal on (LEAB) input makes the A to B latches transparent; a subsequent low to high transition of the LEAB line puts the A latches in the storage

mode and their outputs no longer change with the A inputs. With CEAB and OEAB both low, the B output buffers are active and reflect the data present on the output of the A latches. Control of data flow from B to A is similar, but using the CEBA, LEBA and OEBA. Each byte has separate control inputs, allowing the device to be used as two 8-bit transceivers or as one 16-bit transceiver.

### Logic Diagrams

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Absolute Maximum Ratings (Note 1)		DC Latchup Source Current	
Storage Temperature	-65°C to +150°C	DC Latchup Source Current	-500 mA
Ambient Temperature under Bias	-55°C to +125°C	Over Voltage Latchup (I/O)	10V
Junction Temperature under Bias	-55°C to +150°C	<b>Recommended Operating Conditions</b>	
V <sub>CC</sub> Pin Potential to Ground Pin	-0.5V to +7.0V	Free Air Ambient Temperature	-40°C to +85°C
Input Voltage (Note 2)	-0.5V to +7.0V	Supply Voltage	+4.5V to +5.5V
Input Current (Note 2)	-30 mA to +5.0 mA	Minimum Input Edge Rate ( $\Delta V/\Delta t$ )	
Voltage Applied to Any Output in the Disable or Power-Off State in the HIGH State	-0.5V to +5.5V -0.5V to V <sub>CC</sub>	Data Input	50 mV/ns
Current Applied to Output in LOW State (Max)	twice the rated I <sub>OL</sub> (mA)	Enable Input	20 mV/ns
		Clock Input	100 mV/ns

**Note 1:** Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

**Note 2:** Either voltage limit or current limit is sufficient to protect inputs.

## DC Electrical Characteristics

Symbol	Parameter	Min	Typ	Max	Units	V <sub>CC</sub>	Conditions
V <sub>IH</sub>	Input HIGH Voltage	2.0			V		Recognized HIGH Signal

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
